CLEAN AC POWER WITH MICROPROCESSOR CONTROL AND VACUUM FLUORESCENT DISPLAY

In the PF1352 you'll find the quality features you expect from Behlman; fully adjustable voltage and frequency, low-output THD, high efficiency, plus excellent line and load regulation. There's also a unique overload protection system that fold's back voltage to maintain rated current without output waveform distortion. The unit can be controlled with the front panel pushbuttons or remotely using the standard RS232 interface.

Available options include extended frequency range, (45 Hz to 1000 Hz), rack mount kit and remote programming either IEEE-488 or RS-232/ USB/ Ethernet.

Small size, quiet operation and high efficiency make the PF1352 ideal for industrial product testing, precision avionic test, power conversion and Automatic Test Equipment testing.

PROTECTIVE CIRCUITS

Input: Fuse
Constant Current: Overload automatically causes voltage fold-back to provide maximum current without distorting output waveform

PROTECTIVE CIRCUITS cont.

Short Circuit: Short circuit overload electronically latches output open to protect load... power restored by cycling input power
Thermal: Internal temperature sensor prevents heat damage
Over voltage: Voltage in excess of 20% of maximum electronically latches output to protect load… power restored by cycling input power
