FEATURES

- Single rack space (6U high)
- Rugged construction
- Unique overload protection
- Microprocessor controller with Vacuum Fluorescent Display
- RS-232 or 28 VDC Output control

AIRBORNE FREQUENCY CONVERTER

Behlman’s AFC-7000 series is a ruggedly built, modified COTS frequency converter designed to convert three-phase aircraft power to regulated single-phase (115 or 230 VAC) 50, 60 or 400 Hz. The AFC-7000 is ruggedly built to support aircraft takeoffs and landings and designed to meet the input power requirements of MIL-STD-704 and RTCA-DO-160.

In the AFC-7000 series you’ll find the quality features you expect from Behlman. Low output THD, high efficiency, plus excellent line and load regulation.

INPUT

115/200 VAC, +/-10%, 3-Ph, WYE
350-800 Hz, @ 30 Amps/phase max.
(power derated above 700 Hz)
Multi Pulse Input Transformer for Low Input Current THD

OUTPUT

Power: 6900 VA
Voltage: 7000-1: 115 VAC, single-phase
7000-2: 230 VAC, single-phase
Frequency: (F) 50 Hz, 60 Hz or 400 Hz
Accuracy: +/- 0.1 Hz
Current: 60 Amps @ 115 V
30 Amps @ 230 V
Crest Factor: 3 : 1
Power Factor: 100% of rated output into any power factor load
Distortion: 1.5% THD typical, measured at full load, 115 Volts, 60 Hz
Line Regulation: +/- 0.1% for +/- 10% line change
Load Regulation: +/- 0.7%, no load to full load
Efficiency: 80% typical

PROTECTIVE CIRCUITS

Input: Fast-acting main circuit breaker with guard
Constant Current: Overload automatically causes voltage fold-back to provide maximum current without distorting output waveform

SHORT CIRCUIT: Short-circuit overload electronically latches output open to protect load... power restored by cycling circuit breaker
THERMAL: Internal temperature sensor prevents heat damage

CONTROL / INDICATORS

Power On/Off: Circuit breaker
Control/Display: Microprocessor controller with 24 characters X 2 lines Vacuum Fluorescent display. Displays Volts, Frequency, Current and Current Limit. Fault indicator for Over Voltage (OV), Over Current (OI), Over Temperature (OT), Constant Current (CC) and Short Circuit (OL).
Output On/Off: ON- with Safety Interlock connector supplied with unit.
ON/OFF- with customer supplied 28VDC.
ON/OFF- with RS-232 Interface.
Output Indicator: Indicates output relay is energized
Busy Indicator: Indicated a command is being processed by the microprocessor
Reset Switch: Recessed push-button switch to reset controller
Remote Control: RS-232 to monitor unit, turn output On/Off and set current limit

MECHANICAL & ENVIRONMENTAL

Dimensions: High-strength 19" (48.3 cm) rack mount chassis, 10.5"H X 22"D (26.7 cm X 55.9 cm)

Weight: 128 lbs (58 kgs) Max.

Cooling: Internal fans

Air intake: Front and Sides
Air Exhaust: Rear

Input Connections: J1- MS3102-24-10P
Output Connections: J2- MS3102-32-17S
Remote control: J3- D38999-20WB35PN

Designed to meet the conditions as defined in MIL-STD-810, Method 520.2

Operating Temperature: -4° to 123° F (-20° to 50° C)

Storage Temperature: -4° to 140° F (-20° to 60° C)

Shock: Designed to meet, 18 impacts of 15G's for the duration of 11+/-1 millisecond.

Vibration: Random Vibration Frequency range of 20 to 1000Hz with Power spectrum density of 0.04g²/Hz and from 1KHz to 2KHz beginning at 0.04g²/Hz and drop at a linear –6db/octave rate.

Humidity: 0-95% RH non-condensing.

Altitude: Designed to operate at altitudes of 10,000 feet. Can be exposed to 40,000 feet in a non-operating state, and operate normally when returned to 10,000 feet or less.

Fungus: Designed not to afford fungus nutrition

Electromagnetic Interference: Designed to meet or exceed MIL-STD-461E requirements, intended for installation on Aircraft. To meet RE102 requirement, shielded cable shall be used for Input and Output Cabling.

ELECTRICAL CONNECTIONS:

J1 - Power Input Connector
J2 – Power Output Connector
J3 – Control Connector (Supplied with Safety Interlock plug)
